Chip and Kristine:

As I mentioned during the February 23 meeting in Seattle between EPA and the Portland Harbor technical white paper signatories, an additional and specific technical evaluation has been conducted regarding the PCB sediment bioaccumulation model developed by the Lower Willamette Group. Attached is the evaluation report, supporting materials, and a letter transmitting this report to EPA. The report was prepared by consultants to FMC Corporation and is being submitted by FMC with the support of a number of other Portland Harbor GNL recipients. The LWG PCB sediment bioaccumulation model is the foundation for the PCB PRG that the Draft Feasibility Study applies in evaluating potential PCB RALs and thus it is important and timely to take into account the attached report. Hard copies of this report except for its electronic files also have been sent to you by mail.

We look forward to your review of this report and meeting with you to discuss it when that works for your schedules. Thank you.
